IAS-102/74
31 July 1974

MEMORANDUM FOR: Associate Deputy Director for Intelligence

SUBJECT : IAS Quarterly Report for April-June 1974

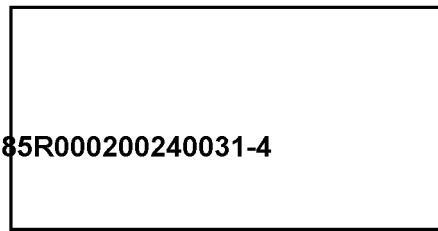

1. There was a considerable increase in requirements for IAS support during this quarter. We received an average of 51 requirements per month--normally we receive about 33 per month. The number of requirements did taper off toward the end of the quarter. A large part of the increase was in requirements from DDS&T, primarily OWI, and largely reflected interest in the new Soviet missile systems. This resulted in some shift in distribution of workload. The proportion of time devoted to DDS&T rose three percent over the previous quarter, while that devoted to the DDI dropped by four percent. A breakdown of time spent by geographic areas, subject and requester is illustrated on the attachment. Only 223 hours of overtime were worked this quarter.

2. We note a continuing modest increase in requirements from the DDO. We received 17 requirements from that directorate this quarter compared with six the previous quarter. However the

5. The China forces analysts in our Military Division joined their counterparts in OSR for a two day meeting in mid-May. One day was held at OSR and the other in IAS. These sessions were conducted to facilitate a better understanding of each others problems, the analytical techniques involved here and at OSR and in general to establish better communications on problems of mutual concern. We feel this was quite beneficial to those involved and are encouraging similar sessions to establish the best possible rapport with our consumers.

6. In April we had the first running of the Information Science and Imagery Analysis Workshop. Fifteen Imagery analysts attended the two week course. The course was initiated by IAS and was developed by OTR, tailored to our specific ADP needs. We were quite pleased with the Workshop--the Imagery analysts were enthusiastic and felt it to be quite beneficial. We are working with OTR to make further refinements, and plan to repeat the workshop several times over the next two years, until all of our analysts have attended.
